English: Business
Japanese: Casual
Serbian: Casual
Hungarian: Native

PROFILE

I'm a highly motivated Software Engineer. Spending most of my free time improving my skill in software development. I have deep roots in Agile development and Object Oriented Programming. That being said, my favorite programming language is C#.

Programming Languages I daily drive: C#, TS, JS, Python, but I also do, C, C++, Elixir.

Stance on AI: I use AI as a productivity tool while maintaining strong emphasis on code quality, architecture, and human review. Just like this Resume: it was purely typed out by me.

EXPERIENCE

Software Engineer — 2023-Present

Progressed from Junior React Developer to a Senior. Now leading a core internal business platform within just two years.

Being a senior C# engineer, I'm also currently migrating the current AWS Amplify stack to ASP.NET (w/ EF) and React as the frontend.

Software Developer, DXC - Part time; Budapest, Hungary — 2023-2023

I was maintaining and refactoring an invoicing system for the employees and freelancers. This was built in Nest.js, and we've used Azure to host this SaaS.

Software Engineer, Xpericad Kft.; Budapest, Hungary — 2021-2024

I worked under a very strict mentor, who made me dive really deep in all .NET technologies. We built ASP.NET backends, extensions for SolidEdge and SolidWorks (CAD softwares) in WPF. We were doing the whole DevOps via Azure: maintaining the Test Suites and repositories too.

Intern, Jusoft Kft.; Ada, Serbia — 2016-2016

I did an internship still while in elementary school and developed a .NET Xamarin app. So my .NET knowledge goes back quite a while.

SKILLS

Backend: C#, ASP.NET Core, EF Core, PostgreSQL, DynamoDB

Frontend: React, TypeScript, Redux Toolkit

Cloud: AWS, Azure, Docker

Architecture: REST APIs, GraphQL, Event-Driven Systems

Tools: Git, GitHub Actions, Azure DevOps
